

AFA ON SUPPLY CHAIN DIGITALISATION

A STORY OF SUPPLY CHAINS STRENGTHENED BY COLLABORATION

ONE COMMON GOAL:

Secure Singapore's economic future through supply chain digitalisation

Achievement

Brought together more than 50 supply chain players to identify opportunities and solutions across the end-to-end supply chain journey. With these findings, a common data infrastructure (CDI), launched as SGTraDex, was established to facilitate trusted and secure data exchange, platform interoperability, and drive efficiency, productivity, and resilience through physical, financial, and information flows.

How it was done

Took a user-centric lens to the diverse and varied landscape of stakeholders involved in the supply chain value chain, and rallied industry players within the ecosystem, to co-create, and bring a shared vision of supply chain end-to-end visibility to fruition.

Outcomes

- Created a plug-and-play infrastructure to enable businesses of all sizes to access data securely across the supply chain journey.
- Strengthened access to new markets, fulfilment, and financing opportunities through e-marketplaces.
- Took important steps to strengthen Singapore's position as a hub for international trade.

“One of the things that came out from this AfA was the decision to build a common data infrastructure to enable the information to be shared more readily, in a more transparent manner, and to enable trade to happen more reliably.”

Tan Chong Meng
Co-Chair, Emerging Stronger Taskforce
Co-Lead, Alliance for Action on Supply Chain Digitalisation
Group CEO of PSA International

“Only Singapore can do this because of our inherent trust with the ecosystem, the business community and the Government. I think this is Singapore's chance to show the world that this is a new way of doing things.”
