

Consumer Price Developments in December 2020

Summary

- MAS Core Inflation fell to **-0.3%** on a year-on-year (y-o-y) basis in December, from **-0.1%** in November.
 - The fall in MAS Core Inflation was mainly driven by a larger decline in services costs as well as lower food inflation.
- CPI-All Items inflation came in at **0%** in December, up from **-0.1%** in November.
 - The increase in CPI-All Items inflation was primarily due to a rise in private transport costs.
- For 2020 as a whole, both MAS Core Inflation and CPI-All Items inflation came in at **-0.2%**, lower than their respective outturns of **1.0%** and **0.6%** in 2019.

Source: MAS, MTI estimates

CPI-All Items inflation was 0% y-o-y in December.

CPI-All Items

% YOY		
Nov	-0.1	
Dec	0.0	

CPI-All Items inflation edged up on account of higher private transport costs.

Private Transport

% YOY		
Nov	-1.3	
Dec	1.2	

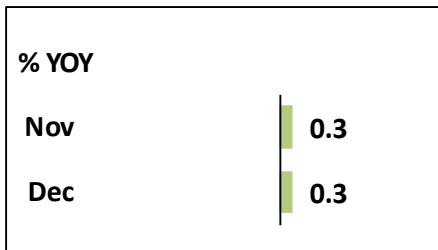

Private transport costs rose in December, primarily because of a sharper increase in car prices.

Retail & Other Goods

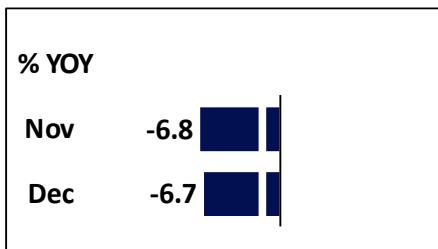

The cost of retail & other goods fell at a slower pace, due to smaller declines in the prices of clothing & footwear and personal care products, as well as an increase in the costs of recreational & cultural goods and telecommunication equipment.

Accommodation

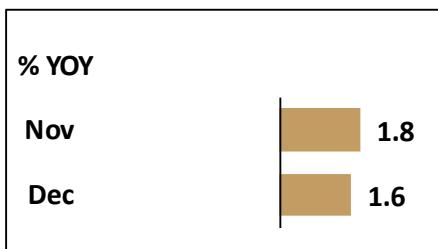

Accommodation inflation remained unchanged in December, as housing rents rose at a similar pace as that recorded in the previous month.

Electricity & Gas

The cost of electricity & gas declined at a slightly slower rate as the take-up of new subscriptions under the Open Electricity Market (OEM) eased.¹

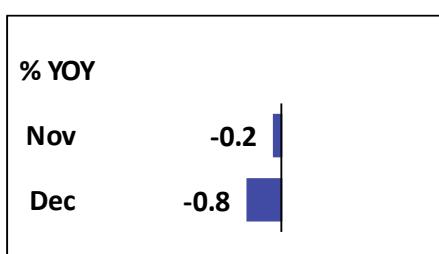

Food

Food inflation dipped on account of smaller increases in the prices of non-cooked food and restaurant meals.

¹ Retail electricity price plans under the OEM generally charge a rate that is lower than SP Group's electricity tariff. Hence, as the take-up of OEM plans slows on a y-o-y basis, the dampening effect of the OEM on electricity prices also declines.

Services

Services costs fell more sharply on the back of smaller increases in public transport fares and telecommunication services fees, as well as a steeper decline in tuition & other fees.²

² The sharper fall in services costs was also driven by larger declines in airfares and holiday expenses in December. However, airfares (together with most of the components in the holiday expenses CPI) were imputed using the overall change in CPI-All Items as they have not been available since April 2020 due to international travel restrictions. For more details, please refer to the Technical Note in the Department of Statistics' release titled "Singapore Consumer Price Index for December 2020 and Full Year 2020".

Outlook

In the quarters ahead, external inflation is likely to pick up amid the expected recovery in global oil prices. However, the extent of the increase will be capped by persistent negative output gaps in Singapore's major trading partners. On the domestic front, cost pressures are expected to stay low, as wage growth and commercial rents are likely to remain subdued.

Core inflation is forecast to turn mildly positive this year, as the projected rise in oil prices from a year ago leads to a pickup in the oil-related components of the CPI and the disinflationary effects of government subsidies introduced in 2020 fade. Some components of domestic services inflation could also gradually increase, in tandem with the economic recovery.

Meanwhile, accommodation costs are expected to fall as the decline in foreign employment will continue to weigh on rentals. In comparison, private transport costs could rise modestly on the back of improving demand.

Both MAS Core Inflation and CPI-All Items inflation averaged -0.2% in 2020. For 2021, MAS Core Inflation is expected to average 0–1%, while CPI-All Items inflation is projected to be between -0.5 and 0.5%.

Annex: Price Indicators

CPI – All Items

The CPI is commonly used as a measure of consumer price changes in the economy. It tracks the change in prices of a fixed basket of consumption goods and services commonly purchased by the general resident households over time.

The CPI covers only consumption expenditure incurred by resident households. It excludes non-consumption expenditures such as purchases of houses, shares and other financial assets and income taxes etc.

The CPI – All Items provides a comprehensive overview of the prices of consumer goods and services. Nevertheless, useful information can also be revealed by complementary CPI series derived by excluding specific items in the All Items basket. For example, two other CPI series reported on a monthly basis are the CPI less imputed rentals on owner-occupied accommodation and the MAS Core Inflation.

MAS Core Inflation

The Monetary Authority of Singapore (MAS) monitors a core inflation measure that excludes the components of “Accommodation” and “Private Transport”. These items are excluded as they tend to be significantly influenced by supply-side administrative policies and are volatile. Core inflation is meant to capture the generalised and persistent price changes that are driven by underlying demand conditions. It thus provides useful information for monetary policy which has the objective of ensuring price stability in the medium term.

CPI less imputed rentals on owner-occupied accommodation

Accommodation, one of the groups in the Housing & Utilities category of the CPI, comprises “rented and owner-occupied accommodation”, as well as “housing maintenance & repairs”. A significant share of the Accommodation group is “owner-occupied accommodation (OOA)” cost, which is meant to reflect the costs to homeowners of utilising the flow of services provided by their homes over an extended period of time. As the cost of using housing services is not directly observed for homeowners, it is proxied by market rentals.

Changes in the CPI imputed rentals on OOA, however, have no direct impact on the monthly cash expenditure of most households in Singapore as they already own their homes. Hence, the CPI less imputed rentals on OOA is compiled as an additional indicator to track households’ actual expenditures. Actual rentals paid on rented homes are still included in this measure.

CPI Statistics

Detailed CPI statistics can be found in the Department of Statistics' release titled "Singapore Consumer Price Index for December 2020 and Full Year 2020". This release also contains further information on the various price indicators published.
