

Consumer Price Developments in August 2025

Summary

- MAS Core Inflation eased to **0.3%** year-on-year (y-o-y) in August, from **0.5%** in July.
 - This was mainly driven by a moderation in services inflation.
 - On a month-on-month (m-o-m) basis, core prices grew by **0.1%** in August.
- CPI-All Items inflation edged down to **0.5%** y-o-y in August, from **0.6%** July.
 - This reflected lower accommodation inflation, in addition to the fall in core inflation.
 - On a m-o-m basis, CPI-All Items rose by **0.5%** in August.

Chart 2: % Point Contribution to Year-on-year CPI-All Items Inflation

* Private transport and accommodation are excluded from the MAS Core Inflation measure.

Source: MAS, MTI estimates

CPI-All Items inflation eased to 0.5% y-o-y in August.

CPI-All Items

CPI-All Items inflation edged down as the pace of price increases for services and accommodation moderated.

Services

Services inflation slowed amid a steeper decline in the costs of holiday expenses, airfares and inpatient services.

Accommodation

Accommodation inflation eased due to a smaller increase in housing rents.

Food

Food inflation was unchanged as a slight moderation in non-cooked food inflation was offset by a mild pickup in food services inflation.

Electricity & Gas

The cost of electricity & gas fell at a slightly quicker pace because of a larger decline in electricity prices.

Private Transport

Private transport inflation rose on account of a larger increase in car prices, as well as a smaller decline in petrol prices.

Retail & Other Goods

The cost of retail & other goods fell at a slower pace as the price of clothing & footwear rose, while that of telecommunication equipment registered a smaller decline.

Outlook

Singapore's imported inflation should remain moderate in the near term. Global crude oil prices remain below year-ago levels, while food commodity price increases should also stay contained. Although the ongoing trade conflicts could be inflationary for some economies, their impact on Singapore's import prices is likely to be offset by the disinflationary drags exerted by weaker global demand.

On the domestic front, slower nominal wage growth and continuing increases in labour productivity should contribute to a moderation in unit labour costs. At the same time, enhanced government subsidies for essential services will continue to dampen services inflation.

Reflecting these factors, both MAS Core Inflation and CPI-All Items inflation are projected to average 0.5–1.5% in 2025. The inflation outlook in the quarters ahead is subject to both upside and downside risks. Geopolitical shocks could lift imported energy and shipping costs abruptly. Conversely, should global and domestic growth be more hesitant and weaker than anticipated, core inflation could stay low for longer.

Annex: Price Indicators

CPI-All Items

The CPI is commonly used as a measure of consumer price changes in the economy. It tracks the change in prices of a fixed basket of consumption goods and services commonly purchased by the general resident households over time.

The CPI covers only consumption expenditure incurred by resident households. It excludes non-consumption expenditures such as purchases of houses, shares and other financial assets and income taxes etc.

The CPI-All Items provides a comprehensive overview of the prices of consumer goods and services. Nevertheless, useful information can also be revealed by complementary CPI series derived by excluding specific items in the All Items basket. For example, two other CPI series reported on a monthly basis are the CPI less Imputed Rentals for Housing and the MAS Core Inflation.

MAS Core Inflation

The Monetary Authority of Singapore (MAS) monitors a core inflation measure that excludes the components of “Accommodation” and “Private Transport”. These items are excluded as they tend to be significantly influenced by supply-side administrative policies and are volatile. Core inflation is meant to capture the generalised and persistent price changes that are driven by underlying demand conditions. It thus provides useful information for monetary policy which has the objective of ensuring price stability in the medium term.

CPI less Imputed Rentals for Housing

Accommodation, one of the groups in the Housing & Utilities expenditure division of the CPI, comprises Actual Rentals for Housing, Imputed Rentals for Housing as well as Housing Maintenance & Repairs.

A significant share of the Accommodation group is Imputed Rentals for Housing, which reflects the costs to homeowners of utilising the flow of services provided by their homes over an extended period of time. Given that the cost of using housing services is not directly observed for homeowners, it is computed based on the imputed rental concept under the rental equivalence method, i.e. proxied by market rentals of similar properties. This provides an estimated rental value for the owned home, as though the homeowner were renting it from themselves. Housing price is not considered in the CPI as it has a high investment component and is treated as a capital good. As for the CPI for Housing Maintenance & Repairs, it takes into account the rebates for Service & Conservancy Charges (S&CC) disbursed to households living in Housing and Development Board (HDB) flats in the applicable months.

Imputed rentals have no impact on the cash expenditure of most households in Singapore as they already own their homes, while the inclusion of S&CC rebates results in some volatility in the monthly CPI. As such, the CPIs for All Items less Accommodation and All Items less Imputed Rentals for Housing are compiled and published as additional indicators. For the CPI for All Items less Imputed Rentals for Housing, actual rentals paid on rented homes are still included in the measure.

CPI Statistics

Detailed CPI statistics can be found in the Department of Statistics' release titled "Singapore Consumer Price Index for August 2025". This release also contains further information on the various price indicators published.
